

THE TOP 6 PROBLEMS **TORO STONE** TACKLES

1

PROBLEM
Complex estimation and ordering

SOLUTION

Toro Stone's packaging simplifies the ordering process by standardizing quantities - each box contains 10 square feet of stone for flats or 10 linear feet for corners, eliminating the confusion caused by odd quantities.

2

PROBLEM
Difficult transportation and maneuverability

SOLUTION

Unlike other veneers that come in awkwardly shaped packages, Toro Stone's vertically stacked boxes make transportation and maneuvering through tight spaces easier for installers.

3

PROBLEM
Inefficient unloading and installation

SOLUTION

The innovative packaging allows for easy and safe unloading, one box at a time, avoiding the cumbersome process of moving and unloading whole crates on job sites.

4

PROBLEM
Limited variety and quality in thin brick veneers

SOLUTION

Toro Stone addresses the gap in the market for high-quality, reliably stocked, and affordably priced thin brick veneer options, offering a wide range of colors and styles.

5

PROBLEM
Lack of durability and aesthetic appeal

SOLUTION

Toro Stone is designed to be both durable and realistic-looking, providing a premium-quality faux stone veneer that installers can be proud to use in their projects.

6

PROBLEM
Lack of easy access to instructions and information

SOLUTION

Toro Stone labels include QR codes that provide instant access to detailed instructions and website information, simplifying the process for installers to find the support and resources they need with just one scan, especially useful when immediate assistance or additional information is needed on the job site.
